

Between 71kg and 90kg (Women) or if you Weigh up to 70kg (Men)

Choose from 'Sample Plan 1' or 'Sample Plan 2' throughout the course of your short-term Programme

- If you start on a Monday (for example) with 'Sample Plan 1', you are free to choose to use 'Sample Plan 2' on a Tuesday etc. etc., no need to stick to the same plan, every single day... but of course if one of the plans is more comfortable for you, you can stick to it every day 😊
- Naturally, these Nutritional Plans would work Best when you Exercise with 'A New, Better Life' at least 3 x week
- For any advice on these Samples, please contact our Graduated Nutritionist on our Exclusive – **Members Only Group** which you will be Invited to Join. Make sure to inform the Nutritionist on this same Private Group, if you need to send her a Personal Facebook Message
- For Faster and Better results, REMEMBER to post a photo of EVERYTHING that you are having on this same group, for Professional feedback and Accountability by the Nutritionist herself

VERY IMPORTANT NOTES & GUIDELINES

- Always **remind the Coach of any injuries/medical issues that might affect your Sessions.**
- We have seen **Even more Amazing results** than usual, when members follow an **Intermittent Fasting (*)** approach.

If Maltese is your Primary Language watch this video by Chief Coach, Matthaeus on how it's done >>>>

<http://bit.ly/FastingIntermittent>

More Detailed Information found at the End of this Booklet (*)

- It is a **MUST** to **bring your own towel** and it is highly recommended that you **get your own mat.**
- If using one of the mats provided by A New, Better Life, please **place a towel on the mat** for your own hygiene and of the team-mates that will be using it after you.
- You can make use of **2 Sets of Showers, Toilets, Changing Rooms and Lockers!** One found in the 'Aquatic Centre' (Level -1) and the other in the 'Gym Area' (Level 0).
- **Book your Group Personal Training Sessions** (Those sessions happening within the upcoming 7 days)

Some Initial Nutrition Thoughts;

- The recommended daily intake for Non-Starchy vegetables is 3-5 portions. The most important thing to remember is to eat a variety of vegetables each day, as much as possible
- Some vegetables are carbohydrate sources (known as Starchy vegetables). These vegetables should be consumed in the right portions mentioned in your Sample Plans below, since they contain carbs and calories
 - Weight of meat is given for raw meat not cooked meat
- The following types of meat might not be very beneficial for Fat Loss: lamb, sausages, burgers (unless homemade and prepared with lean meat; see portion size above), salami and mortadella.
- Other food types, such as; butter, mayonnaise, pizza, pastizzi and other foods made with high fat pastry and cakes are also not beneficial.
 - Extra light mayonnaise (1 teaspoon with each meal), mustard, soy sauce, mint sauce, Tabasco, Worcestershire sauce, Kraft fat free vinaigrette dressing, balsamic vinegar, wine, cubes, sweeteners might also be considered instead of sugar, herbs and spices.
- Tea/coffee/green tea throughout the day would not cause any harm to Healthy Individuals. (unless a lot of milk and/or Sugar is added to them. Sugar is Ideally avoided at all costs).
- Oil (such as Olive Oil) should preferably be drizzled fresh onto salad, instead of applied during the cooking/ heating process.
 - Grilling/baking/boiling/microwaving is more beneficial for fat loss when compared to frying.

Sample Plan 1 (Eat the 4 Medium-Sized Meals mentioned here)

or else go for 'Sample Plan 2' (if you prefer to eat 6 slightly smaller meals)

MEAL 1 (SNACK)

MOST RECOMMENDED >>

FAGE Greek Yogurt (150g)

+ 4 Walnuts

OR

2ND MOST RECOMMENDED >>

2 Eggs (Avoid Deep Frying) + 30g Cheese

OR

1 small cup of Milk (250ml) or Light Yogurt (300g) or FAGE Greek Yogurt (200g)

+

8 Almonds

OR

1 scoop Protein Shake mixed with 250ml of Water or Milk — **SMS the office on: 99003909 to have one ordered for you**

- 20 almonds **or** 20 hazelnuts **or** 20 peanuts
- 2 thin slices of avocado
- 3 Tbsp. seeds (flax, sesame, poppy, chia, pumpkin)

DRINKS:

- Water,
 - homemade vegetable broths
 - BCAA's (Most Recommended for your Recovery from Soreness, to also replace lost Electrolytes and Mostly to help with Toning and Fat Loss – **SMS the office on: 99003909 to have one ordered for you**)

INFUSIONS:

- green, red or black tea, herbal teas, coffee (Avoid adding sugars)

The Daily intake of Multi-Vitamins and Omega 3's

Being short on any vitamins can inhibit the ability to make Toning and strength gains. Research shows that **those who exercise regularly, tend to be low in critical vitamins and minerals, especially when on a calorie-restricted plan in order to Lose Body Fat.**

A sufficient intake of most vitamins can be achieved through a balanced diet; however, it is usually hard for a person to hit the exact amount of necessary levels. Health related problems have been linked with a lack/excess number of vitamins and minerals ingested during a prolonged period and not just by barely missing/exceeding the intake for a day/ few day.

When a person takes a multivitamin, he/she ensure that he/she is getting **adequate levels of these micronutrients, which is going to help support the ability to gain lean muscle tone and increase muscle strength.**

On the other hand, Fish or Plant Oil is an important source of the critical Omega-3 fatty acids, which enhances fat loss. But now, research also suggests **it's important for lean muscle toning, as well as supporting numerous health benefits.** The Omega-3 fatty acids are **essential** fats, meaning the body needs to get them **.Feel free to check this same research for yourself, by visiting the following links;**

BCAA's and their effects during the day, especially during and right after a Session

The branched-chain amino acids referred to here, are **leucine, isoleucine and valine**. Of the three, leucine is the most critical, because science suggests it literally gets into the muscle and turns on the process of muscle protein synthesis (the development of Muscle Toning). Leucine has also been associated with the suppression of hunger in-between snacks/meals or when all the day's snacks have been consumed! **Furthermore, all these three BCAA's work together as an energy source. They are used by the muscles as a fuel source during intense Exercise.**

The last thing we want during a fat loss journey, is to lose muscle tone. Why? Because we want to have **an attractive physique** once most of the body fat is gone and because **LESS muscle tone would lead to LESS fat loss**, even in the early stages of journey. Furthermore, if the body does not have enough fuel, the workout would not be pulled off in a sufficiently effective manner.

Nowadays, BCAA supplements also come in the form of powder, which when mixed water would turn into a very tasty liquid, which do not add any unnecessary calories to your daily intake. **Also, BCAA drinks can be used as a 'water replacement' whenever the person feels like adding some flavor to the liquid consumed every day.** Even though these supplements can be bought off the counter from relatively certain nutrition shops, **we strongly suggest that you seek Medical Advice before consuming any kind of supplement.**

We never base the guidelines and knowledge that we share, based just on our own knowledge; instead **we always reference various credible and recent scientific research** that take place. Feel free to check this same research for yourself, by searching for the following studies / visiting the following links; <http://link.springer.com/article/10.1186%2F1550-2783-6-S1-P1?LI=true>

Why and How can Aloe Vera be a Great Idea to Start with – Especially for Cleansing and to Aid the Removal of Bloating

Aloe contains 74 Highly Beneficial Nutrients in it and when especially taken first thing in the morning will help the body absorb most if not all the Beneficial nutrients found in your Eating Plan too.

An unhealthy gut is generally linked to weight gain. A healthy digestive system translates to proper metabolism of food and an optimal expulsion of waste from the body that helps in losing weight.

Due to it being a laxative, aloe vera juice is ideal for fighting water weight (bloating).

Has been found to help keep Cholesterol levels controlled too.

Aloe vera's fat burning abilities are credited to the presence of vitamin B, which converts the fat stored in the body into energy and aids weight loss.

However, it is important to keep in mind that one should not over exceed the consumption of aloe vera juice and have up to 100ml per day

Whey Protein, why can it help and why?

- **Especially as a Meal Replacement or as a Great way to beat Cravings and indirectly for Fat Loss**

High protein, low carb, low calorie protein shake that assists fat loss. Can be used by both men and women who are either targeting fat loss or looking to maintain a lean physique, year-round. Diet Whey is also suitable for Vegetarians.

36g of quality protein per serving, the protein derives from multiple sources giving you a variety of proteins that release into the blood stream at different stages which offer that drip feed effect of amino acids.

Furthermore, as Diet Whey only contains 6g carbs per super serving and less than 200 calories, it is really macro-friendly & could fit into anybody's nutrition plan; whether you're carb cycling, following a ketogenic (keto) diet or just looking for something tasty that's low in calories, Diet Whey is the perfect option. If this wasn't enough, Diet Whey also

delivers Flaxseed, CLA, L-Carnitine and Green Tea Extract which all support fat loss.

Digestive Enzymes, why they can help and why?

– Especially suitable if you Experience any Gas / Bloating / Upset Stomach / Acid Reflux during or after meals.

When we eat a meal, the requirements for digestive enzymes become a high priority. It's well known that our digestive enzyme production decreases with age, but many large meals can cause our body's enzyme making machinery to work overtime and often is still unable to produce and meet the demand for complete digestion.

Digestion always takes precedence over nearly everything else so many body functions requiring metabolic enzymes are often shortchanged during these times. This deficiency can lead to mal-absorption, poor nutrition, and many digestive problems such as bloating, gas pains and a compromised gut ecosystem.

Digest-ALL® contains enzymes that are plant based.

This supports digestion and reduces our need to produce digestive enzymes, allowing our body to manufacture the metabolic enzymes needed to operate efficiently. Finally, the unique proprietary blend of ginger, peppermint and triphala in Digest-ALL® sets a soothing, comfortable, and balanced stage for the total digestive process, and is vegetarian-friendly.

What is Intermittent Fasting? Is the same as Starving? Is it Good For me?

– Intermittent Fasting is a technique where you fast for a period of time and then you eat for a certain period of time and you cycle these periods... this is called 'Intermittent Fasting'. Starving means NOT eating, this is different cause you start Eating Later and Stop Eating Earlier, but STILL you eat all the meals in the day.

– The type of intermittent fasting that Most have found to work best for Shaping-Up and Looking Great by losing body fat and maintaining muscle is 16/8 intermittent fasting. That means that you fast for 16 consecutive hours (8 of which you should be asleep) and you eat all the Meals and Snacks during 8 consecutive hours, each day.

- When you are Fasting you Should still have drinks that have Zero Calories (like Black Coffee, Black Tea, Still and Sparkling Water).. So having Milk and/or Sugar or Sweetners with your drinks will take you Out of the Fast.

– When you fast you burn more calories and fat. What's interesting is that a particular study found that when you finally eat after fasting the activity of many of these Fat Burning genes are increased even further.

– Research also suggests that fasting provides numerous health benefits, such as lower cholesterol and triglyceride levels, higher HDL (good) cholesterol levels and even greater longevity (Yes you Live Longer and Better if you Control your Eating Time Windows). One study also found that intermittent fasting in men increased red blood cell and hemoglobin levels in the blood.

– One study in men during Ramadan found that the men lost no muscle mass with this form of IF (fasting during the day and eating only between sunset and dawn), yet lost a significant amount of body fat.

– Is it good for me? ... What I can tell you from the Studies above, PROBABLY... BUT, be prepared because the first few days trying this out will be Challenging, as you transition from eating every few hours to fasting for 16 hours (again, 8 hours of which you would be sleeping at night).

- How does Matthaeus Grasso do it? Matthaeus normally stops Eating and Drinking Calories at 8PM, then he has Meal 1 at 12PM (Noon) of the Next Day and he consumes all the Food he needs for the day between 12PM (Noon) and 8PM.
